Mines and Mining Stocks

JUPITER MINE

Recent Developments in Park City Property Insure a Bonanza.

AFTER ALASKA COAL MINES

SALT LAKER ON ROAD TO FOR-TUNE IN NORTH COUNTRY.

Good news comes from the Jupiter-Vindicator property at Park City, where manager O. E. Lawrence is operating a force of twenty-five to thirty men on developing the mine at depth and stoping ore for shipment. Recentfor 100 feet, the vein disclosing from eight inches to a foot of fine shipping ore. This is the same vein that Mr. Lawrence has opened through a tunnel away to the northeast at a depth of 800 feet, and in which he has done stoping to a height of 175 feet and has the ore shoot widening out as he goes up. This yein has held a position in the lime footwall country and, until recently !! has shown no disposition to make into the main fissure. It has been followed, however, to a point on the tunnel level where, for the first time it did connect and here Mr. Lawrence now has a showing that removes all doubt as to what the mine may be counted upon to do in the future. On the footwall side of the fissure he has a shoot of ore that runs 234 ounces silver and 45 to 50 per cent lead up to 4.5 per cent copper. Over on the hanging wall side he has developed an ore body the chief contents of which is copper of an unusually high grade. Much of this ore will run 20 to 35 per cent in red metal, while scattered all through the twenty-four-

There is just one drawback to mining here. The ore is going down strong and all appearances go to show that the replaced lime vein and the shoots encountered in the main fissure are all going to converge at greater depth and make a tremendous body of pay ore. On account of water, however, it has been possible to get down in the ore for only a short distance, it being plain that pumping machinery will be necessary. To men with money this propery is considered to be one of the finest layouts in the camp.

foot ledge is high-grade ore in sufficient

quantity to make the mass an ideal

oncentrating proposition.

In the steps above the tunnel level there is now exposed from eight to ten inches of solid galena and a foot or five ton shipment is now in the bins awaiting repairs to the road that was damaged by the rains of last week.

AFTER ALASKA COAL.

Salt Lake Boy on Road to Fortune in New Country.

C. W. Bechtol, son of John G. Bechtol the old-time business man of this city who has spent the last several years in the Alaska gold fields and who will likethe Alaska gold fields and who will likely return to Salt Lake this coming winter to stay, has just returned from a business trip east. He came down from Fairbanks, in the very heart of Alaska, three or four weeks ago, and went east for the express purpose of interesting epital in coal lands that he has been fortunate enough to discover in the country which he has made his home for the past six years. past six years.
Mr. Bechtol stated yesterday that, at

the termination of his visit here, he would return to the northern country and begin the work that would eventually make him independent. He had secured all the assistance he would need in carrying out his plan and he would get down to business that as soon as it was noscible for

"Two lines of railroad are now reaching out through that country," said Mr. Bechtol, "and it will be a matter of only a year or two until it is all connected up with the coast. It is about the rich-est mineral region in the northwest and its resources in other respects are such that it must and will sustain a large population in the near future. Its valleys are fertile, its forests magnificent, while

gold abounds in all sections."

Mr. Bechtol owns some valuable placer
ground in that country and his father is looking after the property during his trip. The older Bechtol has feathered his nest and when he comes out during the coming winter it will be to take life easy here.

LOOKING TO SALT LAKE.

Johnnie (Nev.) Operator Delegated to Investigate Markets Here.

Johnnie, Nev., Aug. 20.—Fred Bowler, manager of the Minnie Mae lease No. 1, and one of the biggest operators in this section of the country, left here this morning delegated by the residents here to investigate the purchasing possibility of Salt Lake City. Bowler accompanies a carload of ore shipped from his lease to the smelter at Murray and also to get prices from the Utah houses for supplies used here.

This may be the opening of a new com mercial era for Salt Lake, in view of its close connection with this section of the country by way of the Salt Lake route. country by way of the Salt Lake route. The shipment of ore consists of twenty-five tons that run above the hundred dollar mark. Bowler takes with him a sack of specimen rock that will average in the thousands which was considered too valuable to be sent in the car.

L. L. Patrick, formerly of Salt Lake, but later of Goldfield. Nev., visited this district to investigate the reported improvements here, and expressed himself surprised at the progress shown. He in-

Activity in Nevada Stocks Helps in

MINING STOCK EXCHANGE.

Rounding Out Week's Business.

The week closed on the mining exchange with a record so far ahead of the previous week that the comparison becomes almost odious. During the six days a total of 221,399 shares of stock, with a selling value of \$188,712.44, changed hands, or 75,199 shares and \$79,682.44 more than during the week previous. The difference is attributable in a large degree to the activity of Nevada stocks, a feature of the business which, up to a short time ago, commanded but scant attention. The boom spirit that is so contagious in the Sagebrush state has apparently swept over the line into staid old Utah and, if "wild and woolly" times are not experienced in the pit of the local exchange during the fall and winter months as a result, then all signs fail. The market is growing broader and stronger every day and brokers are doing a bigger outoftown business than they have enjoyed in four years. In this respect Utah stocks are just as popular as the Nevada issues and, while the latter have enjoyed greater advances on the whole, the gains made in home stocks have been substantial Rounding Out Week's Business. er advances on the whole, the gains made in home stocks have been substantial and fully warranted.

None of the Utah stocks have declined during the week, while advances of from one to ten points have been made in the more active traders. An effort is now being made to establish closer relations ly Mr. Lawrence has had a force of men stripping a vein on the surface that trends toward the old Jupiter upper workings. He has exposed it now for 100 feet, the vein disclosing from

STRIKE AT FURNACE CREEK.

Patsy Clark Wires East That Large Body of Copper Ore Is Cut.

A message over the Pollock private wires from New York says:
"Patrick Clark has wired Wall street interests in the Furnace Creek copper mine that a large body of high-grade ore has been reached in the main shaft at a depth of 230 feet. The No. 2 shaft, which is down sixty feet, has shown first-class ore all the way down. It was announced several months ago by the Vertery mining expert that at the 250-foot level he would crosscut. The level has been reached about two weeks earlier than had been figured upon and the crosscutting been figured upon and the crosscutting he claims has developed a bonanza show-

AT EAGLE & BLUE BELL.

Level of Property. Captain Duncan MacVichie. consulting captain Duncan MacVienie, consulting engineer for the Bingham Consolidated company, returned from a trip of inspection to the company's Eagle & Blue Bell properties at Tintic Friday night. He stated yesterday that the mine was in the pink of condition. In fact, he never saw it look as well as it does today, and that the saw saying a great deal. that was saying a great deal.

The main operating shaft has reached the 1,000-foot level, and the cutting of a

the 1,000-foot level, and the cutting of a station at that point has commenced. Record time, the captain says, was made in sinking from the 1.000-foot level, a distance of 105 feet having been made in just three weeks. That piece of work shows the kind of a crew that is employed at the property and illustrates, also, how perfectly equipped the mine is to accomplish results.

Railroads Decide to Allow Three Days Before Charging Demurrage on Cars.

SAMPLERS STILL INSISTENT

DECLARE THEY SHOULD HAVE THE SAME TIME.

Following the conference between the sampling mill and smeltermen with the representatives of the railroads over the free time which the Utah Car Service association would allow for the 58½ loading and unloading of ores at mills 86 46 46 46 46 and smelters, a modification of the pro-650 60% 60% 60% 60% 90 60% pcsed new rule was yesterday promul-248 117% 117% 117% 117% gated. By the recent order the free time at samplers and smelters was cut from ninety-six to forty-eight hours, The closing quotations on Nevada stocks in San Francisco yesterday as reported over the rrivate wires of James A. Pollock & Co.. were as follows:

While at the same time the demurrage rate on cars held over the specified limit was cut from \$2 to \$1 a day, of twenty-four hours. ty-four hours.

When the conference closed on Friday neither the mill or smelter representatives were given the least intimation of what action would be taken, nor was it finally decided until the close of a meeting of the railroad officials yesterday morning. At that session it was decided to amend the now famous "circular No. 8" of the Car Service association by providing that the smelters should be allowed three days, or seventy-two hours, free time in which to sample and unload cars of ore and concentrates at their plants and that the rule, as laid down in circular No. 8 should remain unchanged as applied to public sampling works. As the amendment to the rule does not include anything but ores and concentrates at the smelters, they will be required to unload coal, coke, etc., inside of two days or be penalized \$1 a day on each car held.

Smelters Are Satisfied.

Under the modified rule the smelter managements will be able to get along first rate, as any ore sampled by them must be under contracts that provide for its treatment at the plants where the sampling is done. That will make it possible for the smelting company to release a car instantly, almost, after the ore has passed through the mill and shot into the smelter bins. The managers of the public samplers say they are unable to release a car until the samples have been assayed and bids for the ore have been accepted by the shipper, and that consequently greater time is necessary there than at the smelter. But the public sampler's plea has not been heeded and he will have to make the best of it.

Bigger Loads Urged.

One of the sampling mill managers said during the day that it would be the policy of his company to urge upon shippers the advisability of loading cars to their capacity so that, in case demurrage charges had to be met, they would get as much as possible for the dollar a day that would have to be paid on each car. If that is done it will mean only a matter of 2 or 3 cents a tions, the business can be squeezed into three days, leaving only \$1 to pay for demurrage. The subject will be again taken up with the railroads by the sampling millmen as they maintain they ought at least to be accorded as much time as the smelting companies have ton per day and, under ordinary condi-

CRESCENT IS ALL RIGHT.

Black Hills Men Will Cut Loose at Gold Deposit Group.

Crescent, Nev., Aug. 24.-John C. Mc-Carthy has just returned to camp, after spending three months visiting all the new eldoradoes and sensational boom mining camps that have been discovered in the state of Nevada during the last year or two. On his trip Mr. McCarthy visited all the older as well as the more recently discovered camps, and most emphatically declares that in all the much boom and widely advertised camps there is not one of them that will compare with the Crescent district. He is an oldtime miner and prospector and has prospected in every mining camp from the Black Hills through Montana, Idaho, Oregon. Washington and Nevada, and his opinion is that there is no point he has ever seen that will compare with Cres

ent. Mr. McCarthy is associated with W. I. 3.75 Kyle, the well known Black Hills capi-02 talist and mining man, and together with another party they are to commence at orce the development of the Gold Deposit group of claims in this camp. The property lies about two miles south of

the same belt.

The Gold Deposit group comprises five claims, on which there is a large ledge of free milling ore. The ledge is from eighty to 150 feet wide, all of which carries values ranging from \$2.80 to \$24.60 per ton in gold. The owners have a fine living spring of water on the property and have turned down several very flattering offers from intending purchas Mr. McCarthy is going to conduct the development of the claims and has just received a carload of supplies and equip-ment with which to begin operations. He intends sinking a working shaft to a depth of 300 feet on the ledge just as fast as men and machinery can do the work, and on the 300-foot level commence to prospect the ledge to determine the area Shaft Has Reached the 1,100-Foot of the deposit and, if surface appear ances indicate anything, he is certainly justified in the conclusion that in the Gold Deposit group there is a very promising prospect for a large mine

GOLD QUARTZ ANNUAL. One Salt Laker Finds a Berth in the Directorate.
